Design Wood Fireplaces

The individual fireplace with a built-in fireplace insert

SPARTHERM supplies modern, durable fireplace inserts featuring winning technology and design. We commit all our know-how and technical skill when making our inserts because – after all – they are the heart of the fireplace. As well as the exterior, our fireplace inserts are also impressive in terms of what's inside!

SPARTHERM – The Fire Company

We produce in two locations. Spartherm Feuerungstechnik GmbH is one of the largest manufacturers of fireplace inserts, heating cassettes and stoves in Europe.

Technology. Precision. Future.

The name SPARTHERM stands for innovative stove solutions which not only meet top demands in their design but are also high quality and long lasting. This quality philosophy runs through the entire process: from the idea to development and the meticulous production processes through delivery and service – all from one single source.

Spartherm is one of Europe's biggest producers of fireplace inserts, stoves and cassettes. Our employees' know-how is the accumulated experience of more than 30 years and they are committed to being the best in their daily work – each in his or her own particular area, but all with the same goal: perfect products and enthusiastic customers.

In two factories – on a total of around 35,000 m² of production space – we plan, develop and manufacture more than 60,000 units per year: with state-of-the-art facilities, in efficient production processes, in top quality.

With a huge effort and lots of care, we also plan, develop and manufacture personal gems: in our production, we fulfil the very special dreams of our customers – custom-made designs to meet every requirement.

The basis of our success? The high technical quality of the stoves combined with stylish design and consistent innovations in the sector of combustion technology. That is the status quo and it will stay that way. A promise you can rely on.

Our production lines in Melle, Germany and Strzelce Kraje'nskie, Poland: ultra-modern facilities, efficient manufacturing processes and top quality.

And what are your demands?

Mr. Dr. Volker Schmatloch
Doctor of physics
talks about environment
and sustainability

The word 'innovation' comes from the Latin innovare, to renew. We don't interpret this as a renaissance of tradition, but as continuous development looking ahead to a changing future. An approach we especially feel obliged to with regard to what's really important for us and for the future of our children: our environment. We at SPARTHERM take good care and responsibility to ensure that our products do not only meet, but overcome all requirements for an ef-

ficient combustion with minimal emissions. Therefore we do not only put lots of effort in research and further development of the unique looks of our fireplaces, but also focus on what's inside.

Contemporary design and customer relations are our hallmarks, we therefore received the 2016 German brand award among lots of other design prizes in Germany.

But when it comes to sustainability and protecting the environment we live in, we are striving for perfection to give you a perfect combination of both worlds: outstanding design paired with environmental awareness.

Be inspired.
